

**Cointrail Limited  
introduce the latest  
Electronic Data  
Capture (EDC) device  
for the amusement  
and gaming sector.**

- Wireless Data Management System
- Monitor Machine Performance in 'real-time'
- Monitor Float Levels
- Identify Machine Faults & Errors
- Record Refills & Collections
- Detect Fraud Attempts
- Simple & Quick To Install
- Flexible Payment & Rental Options Available

## Wireless Data Capture System

Cointrail Limited introduce the latest Electronic Data Capture (EDC) device, which is a wireless solution using the ZigBee IEEE 802.15.4 standard. This is a completely secure low cost system offering an affordable electronic audit solution for the gaming and amusement sector.

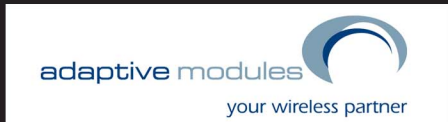

The Electronic Data Capture device is simple and quick to install. The standard 25 way D Type connection allows the device to connect easily to the machines dataport. The system fully supports the BACTA data specification. Additional inputs also allow the device to be connected to coin meters, giving you flexibility to connect to cranes, videos and kiddy rides etc.

All captured data is transmitted securely from the gaming machine to an on-site computer. This data is then presented to the user with a simple to use interface that has been custom made by people working within the industry.

Our management software collates data to provide the user with key information such as:

- Cash In & Out
- Tokens In & Out
- Machine Refills
- Float Levels
- Cashbox Takings
- Power Events
- Door Events
- Machine Error Events
