

D2366 Radio Test Set

The easiest way to find GSM / GPRS networks wherever you are...

The D2366 is a radio test set for use with GSM and GPRS radio networks. The test set will measure and display radio signal strength received as well as levels of received interference. **The radio D2366 GPRS Test Set does all the work for you!**

Shows you the **best location** for your radio products

Helps you **position GSM and GPRS** aerial systems for **best results**

Customisable features - eg: **have your company name** on screen

Very simple to use

Supplied with an aerial, the D2366 can be used to **measure and detect surrounding GSM and GPRS** base stations

Measures and displays **all available GSM and GPRS network information**

The Test Set can also be **"locked" to one network** - just insert the SIM card

Battery included to allow **remote operation for up to 12 hours**

Complete with a charger, aerial and manual

The unit will **switch off automatically** after a preset time, if left on and unused

The D2366 is contained within **an armoured rubber protective sleeve** (different colours available)

Dimensions (H x W x D):

135mm x 78 x 33 (215mm high with supplied aerial)

Weight: 210 g (including aerial)

Temperature: -20C to +60C transit, -4C to +40C operating

Battery: 4 volt, 500mA/h solid electrolyte lithium Ion

Power: Mains 50mA (operation and battery recharging)
